

LET'S GREEN UP

School Website Link:

Our project is carried out in the 2020-2021 Academic Year.

About the Project

The issue of pollution, ecology and protecting the environment has been one of the most important aspects of life discussed on national and international levels. It has also been one of the major areas of concern of the UE countries in recent years. We believe that in order to help preserve our planet we should take action as early as possible. Schools and educators have a great impact not only on students but also on students' families and local communities. We assume that by early education focused on fostering eco attitudes we can shape ecologically-aware adults in the future. Thanks to the participation in the project our schools will have an opportunity to share and learn from each other about what we already do in terms of preserving our environment. We will exchange good practices and work on implementing new ideas into our schools' curriculum. What is more we believe that international cooperation will result in the attitude of open-mindedness towards the issues of ecology,

Registration Certificate And National Quality Label Certificate Of Our Project
